Valet Parking Solutions

FEDERAL APD
VALET
powered by CVPS

Maximum revenue with minimum risk.

Fraudulent damage claims, lost keys, misplaced tickets, and labor-intensive routine tasks are just a few of the challanges faced by valet operation parking executives today. Wouldn't it be nice to have a system that can **lower your labor costs by up to 25%, increase your revenue collection up to 30% and reduce your total claims pay-out by up to 80%**, all while providing you with tools that allow you to visually manage your operations? Introducing Federal APD Valet, powered by CVPS (Computerized Valet Parking System), a turnkey system that is establishing the industry standard for sophiscated valet operations.

Features

- Automated data entry
- Missing key alert
- Interfaces with Hotel Management Systems
- High Definition Digital Camera Modules
- IC Data Flow™ - your data, pushed to you
- Automatic License Plate Recognition
- Vehicle Request Kiosks
- VisualValet™

LABOR COSTS 25%

Reduce labor costs up to 25%.

By setting minimum parks per hour and fronts per hour productivity standards, our employee performance report functions allows you to reward high performers and discipline low performers, typically reducing labor costs between 5% and 25%.

Increase revenue collection up to 30%.

Federal APD's valet solution incorporates automatic fee calculation and customer request kiosks, eliminating the need for manual time clocks and reducing the cash handled by employees. Tight discount and validation controls also restrict validations from within the program.

30% REVENUE COLLECTION

CLAIMS PAY-OUT 80%

Reduce claims pay-out by up to 80%.

With Federal APD's high definition cameras and full motion video from varying angles, damage claims are now easy to research and deny. Instantly look-up the vehicles condition upon arriving to assess the validity of the damage claim.

Valet App Suite

From multiple ticket issuance options and data capture upon arrival to POS Credit Card and receipt e-mailing capability, Federal APD's Valet App Suite lets you easily cater to the customer through the entire valet process.

Automated Data Entry

Through the use of online registration, license plate recognition or VIN number scanning, Federal APD can easily automate the data entry process, eliminating the mistakes that often come with manual entry.

High Definition Digital Camera Modules

Denying claims with high resolution pictures and videos is far more successful than with manual sketches. These camera modules allow for users to quickly look-up a vehicles condition upon entry and assess the validity of a damage claim.

VisualValet™

Rather than using text-driven data entry, operators can utilize the Valet App and/or our fixed high definition camera lane to capture images of the vehicles as they are parked by the valets. Users now have a unique identifier that can allow valets to retrieve vehicles with little or no additional manual data entry steps.

ICDataFlow™

The industry's first intelligent data management solution, ICDataFlow allows valet parking operaters to use visual gadgets to represent data from within the applicaton. Data is pushed to you as it happens, allowing you to manage your operations in real-time.

Customer Vehicle Request

Federal APD allows customers to quickly request their vehicle in advance of their departure, through self serve kiosks, dial-up requests or smart phone applications.
